

## SEVERE WEATHER BULLETIN #22-FINAL

FOR: TROPICAL DEPRESSION "VICKY" (KROVANH)

TROPICAL CYCLONE: ALERT

ISSUED AT 11:00 AM, 21 December 2020

**"VICKY" WEAKENS INTO A TROPICAL DEPRESSION AS IT CONTINUES TO MOVE AWAY FROM THE KALAYAAN ISLANDS.**

### Hazards affecting land areas:

- **Strong winds:** The tropical cyclone wind signal over the Kalayaan Islands is now lifted. However, due to the surge of the Northeast Monsoon enhanced by the tropical depression, Batanes, Babuyan Islands, and the northern portions of Cagayan, Apayao, and Ilocos Norte will be experiencing strong to gale-force winds, while occasional gusty conditions are also likely over the eastern portions of mainland Cagayan, Isabela, Aurora, Quezon, and Palawan including Calamian Islands.
- **Heavy rainfall:**
  - **Today:** Moderate to heavy rains over Kalayaan Islands, Babuyan and Calayan Islands, the eastern portion of mainland Cagayan Valley, Aurora, and the northern portion of Quezon. Light to moderate with at times heavy rains over the rest of mainland Cagayan Valley, Apayao, Kalinga, Mountain Province, Ifugao,
  - **Tomorrow:** Moderate to heavy rains over Cagayan and Apayao. Light to moderate with at times heavy rains over Kalinga, Mountain Province, Ifugao, Aurora, Quezon, and the rest of Cagayan Valley.
  - **Flooding (including flash floods) and rain-induced landslides may occur during heavy or prolonged periods of rainfall,** especially in areas identified to be highly or very highly susceptible to these hazards and in localities that received significant antecedent rainfall over the past couple of days or weeks. Adjacent or nearby areas may also experience flooding in the absence of such rainfall occurrence due to surface runoff or swelling of river channels. PAGASA Regional Services Divisions may issue local thunderstorm/rainfall advisories and heavy rainfall warnings in their respective areas of responsibility while the Hydrometeorology Division and River Basin Flood Forecasting and Warning Centers may issue general flood advisories and river basin flood advisories/bulletins as appropriate.

### Hazards affecting coastal waters:

- In the next 24 hours, the surge of the Northeast Monsoon enhanced by VICKY will bring **rough to high seas (3.0 to 6.0 m)** over the entire seaboard of Northern Luzon and **rough to very rough seas (2.8 to 4.5 m)** over the seaboard of Central Luzon, the eastern seaboard of northern Quezon including the northern and eastern waters of Polillo Islands, the seaboard of Camarines Norte, the northern seaboard of Camarines Sur, the northern and eastern seaboard of Catanduanes, the seaboard of Lubang Island, and the western seaboard of Palawan including Calamian and Kalayaan Islands. **Sea travel is risky over these waters especially for small sea vessels.**

### Track and intensity outlook:

- **Track:** VICKY will continue to move away from the Kalayaan Islands and move generally southwestward in the next 24 hours over the West Philippine Sea before turning westward by Tuesday.
- **Intensity:** VICKY is forecast to remain as a tropical depression throughout the forecast period and is less likely to further intensify due to marginal conditions associated with the surge of the Northeast Monsoon

Location of eye/center	At 10:00 AM today, the center of Tropical Depression "VICKY" was estimated based on all available data at 210 km South Southwest of Kalayaan, Palawan (OUTSIDE PAR) (9.3°N, 113.3°E).	
Strength	Maximum sustained winds of 55 km/h near the center and gustiness of up to 70 km/h.	
Movement	Moving South Southwestward at 10 km/h.	
Forecast Positions	<ul style="list-style-type: none"><li>• 24 Hour (Tomorrow morning): 455 km Southwest of Kalayaan, Palawan (OUTSIDE PAR) (8.4°N, 110.9°E)</li></ul>	

**NO TROPICAL CYCLONE WIND SIGNAL**

**With this development and unless re-entry occurs, this is the final warning for this weather disturbance.**
