

SEVERE WEATHER BULLETIN #11 FOR: SEVERE TROPICAL STORM "ULYSSES" (VAMCO) TROPICAL CYCLONE: WARNING

ISSUED AT 5:00 AM, 11 November 2020

(Valid for broadcast until the next bulletin to be issued at 8 AM today)

SEVERE TROPICAL STORM "ULYSSES" SLOWS DOWN OVER THE PHILIPPINE SEA WHILE MAINTAINING STRENGTH.

Hazards affecting land areas:

- **Strong winds:** Throughout the passage of the severe tropical storm, the areas under Tropical Cyclone Wind Signal (TCWS) #2 will be experiencing damaging gale-force to storm-force winds, while those under TCWS #1 will have strong breeze to near gale conditions. Given the likelihood of intensification into a typhoon in the next 12 to 24 hours, **TCWS #3 may be raised over several provinces in Bicol Region (and eventually over Metro Manila and portions of CALABARZON and Central Luzon) once "ULYSSES" is upgraded to typhoon category.** In other areas, the rest of Northern Luzon will be experiencing strong breeze to gale-force winds due to the surge of the Northeast Monsoon.
- **Heavy rainfall:** **Between this early morning and this late afternoon, heavy to intense with at times torrential rains** over Camarines Norte, Camarines Sur, and Catanduanes. **Moderate to heavy with at times intense rains** over Albay, Sorsogon, Quezon including Polillo Islands, and Burias and Ticao Islands. **Light to moderate with at times heavy rains** over Metro Manila and the rest of Luzon and Visayas. **Between this late afternoon and tomorrow early morning, heavy to intense with at times torrential rains** over Camarines Norte, Camarines Sur, Metro Manila, CALABARZON, Aurora, Bulacan, Pampanga, and Bataan. **Moderate to heavy with at times intense rains** over Cordillera Administrative Region, mainland Cagayan Valley, Catanduanes, Marinduque, the northern portion of Mindoro Provinces, and the rest of Central Luzon. **Light to moderate with at times heavy rains** over the rest of Luzon and Visayas.
- **Flooding (including flashfloods), rain-induced landslides, and sediment-laden streamflows (i.e. lahar) may occur during heavy or prolonged rainfall especially in areas that are highly or very highly susceptible to these hazards and/or those that received significant antecedent rainfall.** PAGASA Regional Services Divisions may issue local thunderstorm/rainfall advisories and heavy rainfall warnings while the Hydrometeorology Division and River Basin Flood Forecasting and Warning Centers may issue General Flood Advisories and Basin Flood Bulletins as appropriate.
- **Storm surge:** **There is a high risk of storm surge with heights of up to 3.0 m** over the coastal areas of Quezon including Polillo Islands, Camarines Norte, Catanduanes, and the northern and eastern coastal areas of Camarines Sur, and **up to 2.0 m** over the coastal areas of Aurora, Bataan, Pampanga, Bulacan, Metro Manila, Cavite, Batangas, northern portions of Mindoro Provinces including Lubang Island, Marinduque, Romblon, Masbate including Ticao and Burias Islands, Albay, and Sorsogon, and the remaining coastal areas of Camarines Sur. **These storm surges, which may be accompanied by swells and/or breaking waves near the coast, can cause life-threatening and damaging coastal inundation.** Moreover, there is also a moderate risk of seiche or storm surge over the coastal areas surrounding Laguna de Bay.

Hazards affecting coastal waters:

- In the next 24 hours, **rough to very high seas (2.5 to 10.0 m)** will be experienced over the seaboard of areas under TCWS and the eastern seaboard of Eastern Samar currently not under TCWS #1. The surge of the Northeast Monsoon will also bring **rough to high seas (3.0 to 6.0 m)** over the remaining seaboard of Northern Luzon and **rough seas (2.5 to 3.5 m)** over the seaboard of Kalayaan Islands. **Sea travel is risky for all types of seacrafts over these waters.**
- **Moderate to rough seas (1.5 to 2.5 m)** will be experienced over the western seaboard of Palawan including Calamian Islands, and the eastern seaboard of Mindanao. **Mariners of small seacrafts are advised to take precautionary measures when venturing out to sea. Inexperienced mariners should avoid navigating in these conditions**

Track and intensity outlook:

- **Track:** On the forecast track, Severe Tropical Storm "ULYSSES" will move generally westward throughout the forecast period and pass over the seas north of Catanduanes between this morning and afternoon and north off Camarines Provinces between this afternoon or evening. Due to the orientation of the track forecast, these provinces may fall within the inner rainbands of this storm during the passage. The center of "ULYSSES" is forecast to make landfall over Polillo Islands and mainland Quezon between tonight and tomorrow early morning. Afterwards, "ULYSSES" will cross mainland Luzon and emerge over the western seaboard of Central Luzon between tomorrow morning and afternoon.
- **Intensity:** "ULYSSES" is forecast to intensify into a typhoon within the next 12 hours and reach its peak intensity of 130-155 km/h prior to landfall. "ULYSSES" may slightly weaken as it crosses mainland Luzon due to the presence of the Sierra Madre and Zambales Mountain Ranges along its projected path. However, it is likely to remain a typhoon during its traverse.
