TROPICAL CYCLONE ADVISORY NO. 4A

Tropical Storm NANMADOL

Issued at 5:00 AM, 14 September 2022

Valid for broadcast until the next advisory at 11:00 AM today

GENERAL OUTLOOK FOR THE FORECAST PERIOD

- NANMADOL is forecast to track generally northeastward in the next several hours before sharply turning northwestward for the remainder of today. It will then accelerate west northwestward tomorrow through Friday towards the northeastern portion of the Philippine Area of Responsibility (PAR). On the track forecast, it may enter the PAR region on Thursday evening or Friday morning. Once inside the PAR, the domestic name "JOSIE" will be assigned to this tropical cyclone.
- NANMADOL intensified into a Tropical Storm at 2:00 AM. Improving environmental conditions by tomorrow will enable the tropical cyclone to further intensify. Current forecast scenario shows that this tropical cyclone will enter the PAR as a typhoon.
- This tropical storm is forecast to remain far from the Philippine landmass and not directly affect the weather condition in the country. However, it may **enhance the Southwest Monsoon** within the forecast period. This may bring **monsoon rains** over the western sections of Southern Luzon and Visayas beginning today or tomorrow. As such, the **issuance of a Weather Advisory is not ruled out** should heavy rains become possible or likely.

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to continue monitoring for updates related to this tropical cyclone.

Unless an intermediate advisory or initial tropical cyclone bulletin is released, the next tropical cyclone advisory will be issued at 11:00 AM today.
