

# **TROPICAL CYCLONE BULLETIN NR. 3**

## **Tropical Depression PAOLO**

Issued at 11:00 PM, 01 October 2025

Valid for broadcast until the next bulletin at 5:00 AM tomorrow.

### **“PAOLO” SLIGHTLY DECELERATES AS IT MOVES WESTWARD OVER THE PHILIPPINE SEA.**

#### **Location of Center (10:00 PM)**

The center of Tropical Depression PAOLO was estimated based on all available data at **565 km East of Virac, Catanduanes** or **695 km East of Daet, Camarines Norte (14.1°N, 129.4°E)**.

#### **Intensity**

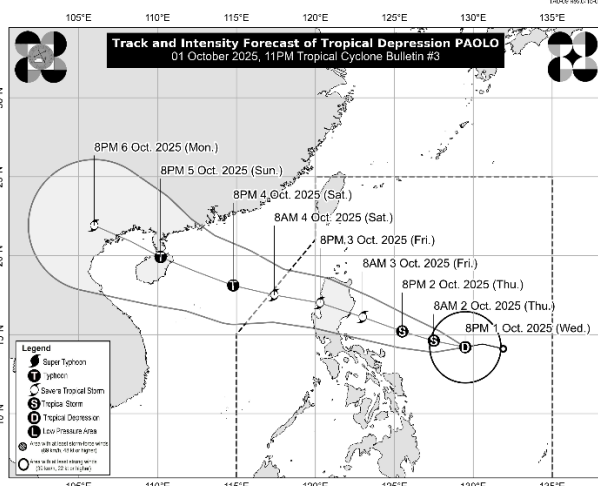

Maximum sustained winds of **55 km/h** near the center, gustiness of up to **70 km/h**, and central pressure of **1002 hPa**

#### **Present Movement**

**Westward at 20 km/h**

#### **Extent of Tropical Cyclone Winds**

**Strong winds** extend outwards up to **250 km** from the center

## TROPICAL CYCLONE BULLETIN NR. 3

### Tropical Depression PAOLO

Issued at 11:00 PM, 01 October 2025

Valid for broadcast until the next bulletin at 5:00 AM tomorrow.

TROPICAL CYCLONE WIND SIGNALS (TCWS) IN EFFECT			
TCWS No.	Luzon	Visayas	Mindanao
<b>1</b>  Wind threat: <b>Strong winds</b>	<b>The eastern and central portions Isabela</b> (Alicia, San Mateo, Aurora, San Mariano, Ramon, Naguilian, Dinapigue, Roxas, San Guillermo, Luna, City of Cauayan, Echague, Ilagan City, Angadanan, Benito Soliven, City of Santiago, Reina Mercedes, San Agustin, San Manuel, Palanan, Cabatuan, Quirino, Gamu, San Isidro, Cordon, Jones, Burgos, Maconacon, Divilacan, Tumauni), <b>Quirino, the northern and central portions of Aurora</b> (Dilasag, Casiguran, Dinalungan, Dipaculao, Baler, Maria Aurora, San Luis), <b>and the northern portion of Catanduanes</b> (Pandan, Bagamanoc, Panganiban, Viga)		
	Warning lead time: <b>36 hours</b> Range of wind speeds: <b>39 to 61 km/h (Beaufort 6 to 7)</b> Potential impacts of winds: <b>Minimal to minor threat to life and property</b>		

OTHER HAZARDS AFFECTING LAND AREAS
<b><u>Heavy Rainfall Outlook</u></b>  Refer to Weather Advisory No. 2 issued at 11:00 PM today for the heavy rainfall outlook due to Tropical Cyclone PAOLO.  <b><u>Severe Winds</u></b>  The wind signals warn the public of the general wind threat over an area due to the tropical cyclone. Local winds may be slightly stronger/enhanced in coastal and upland/mountainous areas exposed to winds. Winds are less strong in areas sheltered from the prevailing wind direction. <ul style="list-style-type: none"><li>Minimal to minor impacts from strong winds are possible within any of the areas under Wind Signal No. 1.</li></ul> The highest Wind Signal that will likely be hoisted throughout its passage is Wind Signal No. 3. However, since the possibility of reaching typhoon category before landfall is not ruled out, the worst case scenario is Wind Signal No. 4.  <b><u>Coastal Inundation</u></b>  There is a moderate risk of life-threatening storm surge with peak heights reaching 1.0 to 2.0 m within 48 hours over the low-lying or exposed coastal localities of Cagayan, Isabela, Aurora, and Quezon. Refer to Storm Surge Warning No. 2 issued at 8:00 PM today for the details.

HAZARDS AFFECTING COASTAL WATERS
<b><u>24-Hour Sea Condition Outlook</u></b>  Gale Warning may be raised over the seaboard of Northern and Central Luzon as early as tomorrow (02 October) afternoon in anticipation of rough to very rough sea conditions caused by the passage of PAOLO.

### TROPICAL CYCLONE BULLETIN NR. 3

#### Tropical Depression PAOLO

Issued at 11:00 PM, 01 October 2025

Valid for broadcast until the next bulletin at 5:00 AM tomorrow.

#### TRACK AND INTENSITY OUTLOOK

- It must be emphasized that heavy rainfall, severe winds, and storm surge may still be experienced in localities outside the landfall point and the forecast confidence cone. Refer to “Other Hazards affecting Land Areas” for more details. Furthermore, the track may still shift within the limit of the forecast confidence cone.
- PAOLO is forecast to move generally westward to west northwestward for the entire forecast period. On the forecast track, **PAOLO may make landfall over Isabela or northern Aurora on Friday (03 October) morning or afternoon.** Further southward shift of track is possible depending on the strength of the high pressure area to the north of PAOLO. It will exit the Philippine Area of Responsibility by Saturday (04 October) morning.
- PAOLO will continue to intensify while over the Philippine Sea and may reach severe tropical storm category by Friday early morning. Further intensification into a Typhoon prior to landfall is not ruled out. Re-intensification is highly likely once PAOLO emerges over the West Philippine Sea.

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to take all necessary measures to protect life and property. Persons living in areas identified to be highly or very highly susceptible to these hazards are advised to follow evacuation and other instructions from local officials. **For heavy rainfall warnings, thunderstorm/rainfall advisories, and other severe weather information specific to your area, please monitor products issued by your local PAGASA Regional Services Division.**

The next tropical cyclone bulletin will be issued at 5:00 AM tomorrow.
