Typhoon TINO (KALMAEGI)

Issued at 11:00 AM, 03 November 2025

Valid for broadcast until the next bulletin at 2:00 PM today.

TRACK AND INTENSITY OUTLOOK

- **Heavy rainfall, severe winds, and storm surge may still be experienced in localities outside the landfall point and the forecast confidence cone. Refer to hoisted Wind Signals and the “Other Hazards affecting Land Areas” section for more details. Furthermore, the track may still shift within the limit of the forecast confidence cone.**
- On the track forecast, TINO will move generally westward and may make its initial landfall over the vicinity of the southern portion of Eastern Samar, Leyte, Southern Leyte, or Dinagat Islands tonight or tomorrow (04 November) early morning. Afterwards, TINO will traverse Visayas and northern Palawan before emerging over the West Philippine Sea on Wednesday (05 November) afternoon.
- TINO is forecast make its initial landfall at or near peak intensity (*currently forecasted around 150-165 km/h maximum winds with higher gustiness*). Rapid intensification within the next 24 hours is likely. The possibility of reaching super typhoon category is not ruled out based on alternate scenarios and climatological data. While its interaction with the terrain will trigger a slight weakening, TINO is expected to remain as a typhoon throughout its passage over the country.

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to take all necessary measures to protect life and property. Persons living in areas identified to be highly or very highly susceptible to these hazards are advised to follow evacuation and other instructions from local officials. **For heavy rainfall warnings, thunderstorm/rainfall advisories, and other severe weather information specific to your area, please monitor products issued by your local PAGASA Regional Services Division.**

The next tropical cyclone bulletin will be issued at 2:00 PM today.
