## TROPICAL CYCLONE ADVISORY NR. 2

### Tropical Depression

Issued at 11:00 PM, 04 November 2025

Valid for broadcast until the next bulletin at 11:00 AM tomorrow.

#### GENERAL OUTLOOK FOR THE FORECAST PERIOD

- In the next 12 hours, this tropical cyclone (TC) is forecast to slow down while moving west southwestward (and at times behave erratically). Afterwards, it will gradually accelerate generally northwestward over the Philippine Sea until Friday (07 November) morning before turning west northwestward on Friday evening or Saturday (08 November). On the track forecast, the TC may enter the PAR region on Friday evening or on Saturday. Once inside the PAR, the domestic name "UWAN" will be assigned to this TC.
- Although not yet within the forecast range of this advisory, TC Threat Potential Forecast from PAGASA indicates that the possibility of a landfall scenario over the country is becoming more likely. However, the exact landfall location and time remains highly uncertain, considering that the forecast is more than five days ahead.
- In terms of intensity, this TC is forecast to intensify while over the Philippine Sea throughout the forecast period. It may eventually reach typhoon category on Thursday (06 November) and super typhoon during the weekend.
- **This TC is not yet affecting the land and sea areas of the country.** Furthermore, the TC is less likely to directly affect the weather condition in the country throughout the forecast period. However, owing to the influence of both this TC and a Northeast Monsoon surge, rough sea conditions or worse may affect the northern and eastern seaboard of the country starting on Saturday.

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to continue monitoring for updates related to this tropical cyclone.

Unless there is an intermediate issuance, the next tropical cyclone advisory will be issued at 11:00 AM tomorrow.
