TRACK AND INTENSITY OUTLOOK

- SALOME is forecast to move generally southwestward throughout the forecast period due to the High-Pressure Area over mainland China. After passing close to Babuyan Islands this morning, it may also pass close to Ilocos Norte this afternoon.
- SALOME is forecast to continue weakening throughout the forecast period until it becomes a remnant low. An earlier weakening scenario is likely due to unfavorable conditions.

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to take all necessary measures to protect life and property. Persons living in areas identified to be highly or very highly susceptible to these hazards are advised to follow evacuation and other instructions from local officials. **For heavy rainfall warnings, thunderstorm/rainfall advisories, and other severe weather information specific to your area, please monitor products issued by your local PAGASA Regional Services Division.**

The next tropical cyclone bulletin will be issued at 5:00 PM today.
