

TROPICAL CYCLONE BULLETIN NR. 10

Severe Tropical Storm PAOLO (MATMO)

Issued at 2:00 AM, 03 October 2025

Valid for broadcast until the next bulletin at 5:00 AM today.

"PAOLO" MAINTAINS ITS STRENGTH AS IT CONTINUES TO MOVE WESTWARD.

Location of Center (1:00 AM)

The center of Severe Tropical Storm PAOLO was estimated based on all available data including those from Baler and Daet Doppler Weather Radar at **255 km East of Baler, Aurora (15.8°N, 124.0°E)**.

Intensity

Maximum sustained winds of **95 km/h** near the center, gustiness of up to **115 km/h**, and central pressure of **994 hPa**

Present Movement

Westward at 25 km/h

Extent of Tropical Cyclone Winds

Strong to storm-force winds extend outwards up to 350 km from the center

TRACK AND INTENSITY FORECAST

Date and Time	Center Position			Intensity		Movement dir. and speed (km/h)
	Lat. (°N)	Lon. (°E)	Location	MSW (km/h)	Cat.	
12-Hour Forecast 11:00 AM 03 October 2025	16.5	122.2	In the vicinity of Dinaigague, Isabela	110	STS	WNW 20
24-Hour Forecast 11:00 PM 03 October 2025	17.5	119.1	150 km West Southwest of Sinait, Ilocos Sur	100	STS	WNW 30
36-Hour Forecast 11:00 AM 04 October 2025	18.2	116.4	430 km West of Sinait, Ilocos Sur (OUTSIDE PAR)	120	TY	WNW 25
48-Hour Forecast 11:00 PM 04 October 2025	19.0	113.6	830 km West of Extreme Northern Luzon (OUTSIDE PAR)	130	TY	WNW 25

TROPICAL CYCLONE BULLETIN NR. 10

Severe Tropical Storm PAOLO (MATMO)

Issued at 2:00 AM, 03 October 2025

Valid for broadcast until the next bulletin at 5:00 AM today.

OTHER HAZARDS AFFECTING LAND AREAS

Heavy Rainfall Outlook

Refer to Weather Advisory No. 6 issued at 11:00 PM yesterday for the heavy rainfall outlook due to Tropical Cyclone PAOLO.

Severe Winds

The wind signals warn the public of the general wind threat over an area due to the tropical cyclone. Local winds may be slightly stronger/enhanced in coastal and upland/mountainous areas exposed to winds. Winds are less strong in areas sheltered from the prevailing wind direction.

- **Moderate to significant impacts** from storm-force winds are possible within any of the areas under Wind Signal No 3.
- **Minor to moderate impacts** from gale-force winds are possible within any of the areas under Wind Signal No. 2.
- **Minimal to minor impacts** from strong winds are possible within any of the areas under Wind Signal No. 1.

Since the possibility of reaching typhoon category before landfall is not ruled out, the worst-case scenario is Wind Signal No. 4.

Furthermore, the periphery of PAOLO will also bring **strong to gale-force gusts** over the following areas not under Wind Signal (especially in coastal and upland areas exposed to winds):

- **Today:** Batanes, Central Luzon, Metro Manila, CALABARZON, Bicol Region, Panay Island, Occidental Mindoro, Oriental Mindoro, Northern Samar, and Eastern Samar
- **Tomorrow (4 October):** Ilocos Region

Coastal Inundation

There is a **moderate to high risk of life-threatening storm surge** with peak heights reaching **1.0 to 3.0 m** within 24 hours over the low-lying or exposed coastal localities of Ilocos Norte, Ilocos Sur, La Union, Pangasinan, Zambales, Cagayan, Isabela, Aurora, and Quezon. Refer to Storm Surge Warning No. 7 issued at 2:00 AM today for the details.

TROPICAL CYCLONE BULLETIN NR. 10
Severe Tropical Storm PAOLO (MATMO)

Issued at 2:00 AM, 03 October 2025

Valid for broadcast until the next bulletin at 5:00 AM today.

HAZARDS AFFECTING COASTAL WATERS

Gale Warning is in effect over the seabards of Northern Luzon and the eastern seaboard of Central Luzon. For more details, refer to Gale Warning No. 2A issued at 11:00 PM yesterday.

24-Hour Sea Condition Outlook

Up to very rough, high, or very high seas over the following coastal waters:

- Up to 11.0 m: The seabards of Isabela and northern Aurora.
- Up to 6.0 m: The eastern seaboard of mainland Cagayan; the western seaboard of Ilocos Norte; the seabards of Ilocos Sur and La Union
- Up to 5.0 m: The remaining seabards of mainland Cagayan and Ilocos Norte; the seabards of Babuyan Islands
- **Sea travel is risky for all types or tonnage of vessels. All mariners must remain in port or, if underway, seek shelter or safe harbor as soon as possible until winds and waves subside.**

Up to rough seas over the following coastal waters:

- Up to 4.0 m: The seabards of Batanes; the remaining seabards of Aurora; the northern and eastern seaboard of Polillo Islands
- Up to 3.5 m: The seabards of northern Quezon and Camarines Norte; the seabards of Pangasinan
- Up to 3.0 m: The northern seabards of Catanduanes and Camarines Sur
- **Mariners of small seacrafts, including all types of motorbancas, are advised not to venture out to sea under these conditions, especially if inexperienced of operating ill-equipped vessels.**

Up to moderate seas over the following coastal waters:

- Up to 2.5 m: The eastern seabards of mainland Quezon, Catanduanes, Rapu-Rapu Islands, and Sorsogon; the northern and eastern seaboard of Northern Samar; the western seaboard of Zambales and Bataan; the remaining seabards of Polillo Islands
- **Mariners of motorbancas and similarly sized vessels are advised to take precautionary measures while venturing out to sea and, if possible, avoid navigation under these conditions.**

TROPICAL CYCLONE BULLETIN NR. 10

Severe Tropical Storm PAOLO (MATMO)

Issued at 2:00 AM, 03 October 2025

Valid for broadcast until the next bulletin at 5:00 AM today.

TRACK AND INTENSITY OUTLOOK

- It must be emphasized that heavy rainfall, severe winds, and storm surge may still be experienced in localities outside the landfall point and the forecast confidence cone. Refer to "Other Hazards affecting Land Areas" for more details. Furthermore, the track may still shift within the limit of the forecast confidence cone.
- PAOLO is forecast to move generally west northwestward throughout the forecast period. On the forecast track, **PAOLO may make landfall over Isabela or northern Aurora this morning or noon.** Further southward shift of track is possible depending on the strength of the high pressure area located north of PAOLO. After crossing the landmass of Northern Luzon, it will emerge over the West Philippine Sea by the afternoon and will continue moving west northwestward until it exits the Philippine Area of Responsibility by tomorrow (04 October) morning.
- PAOLO will continue to intensify while over the Philippine Sea. Further intensification into a typhoon prior to landfall is not ruled out. However, based on the intensity forecast, intensification into typhoon is highly likely once PAOLO emerges over the West Philippine Sea.

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to take all necessary measures to protect life and property. Persons living in areas identified to be highly or very highly susceptible to these hazards are advised to follow evacuation and other instructions from local officials. **For heavy rainfall warnings, thunderstorm/rainfall advisories, and other severe weather information specific to your area, please monitor products issued by your local PAGASA Regional Services Division.**

The next tropical cyclone bulletin will be issued at 5:00 AM today.
