

TROPICAL CYCLONE BULLETIN NR. 14

Typhoon PAOLO (MATMO)

Issued at 2:00 PM, 03 October 2025

Valid for broadcast until the next bulletin at 5:00 PM today.

“PAOLO” SLIGHTLY WEAKENS WHILE TRAVERSING THE MOUNTAINOUS REGION OF NORTHERN LUZON.

Location of Center (1:00 PM)

The center of Typhoon PAOLO was estimated based on all available data **in the vicinity of Mayoyao, Ifugao (17.0°N, 121.2°E)**.

Intensity

Maximum sustained winds of **120 km/h** near the center, gustiness of up to **200 km/h**, and central pressure of **980 hPa**

Present Movement

West northwestward at 30 km/h

Extent of Tropical Cyclone Winds

Strong to typhoon-force winds extend outwards up to **480 km** from the center

Typhoon PAOLO (MATMO)

Issued at 2:00 PM, 03 October 2025

Valid for broadcast until the next bulletin at 5:00 PM today.

OTHER HAZARDS AFFECTING LAND AREAS

Heavy Rainfall Outlook

Refer to Weather Advisory No. 8 issued at 11:00 AM today for the heavy rainfall outlook due to Tropical Cyclone PAOLO.

Severe Winds

The wind signals warn the public of the general wind threat over an area due to the tropical cyclone. Local winds may be slightly stronger/enhanced in coastal and upland/mountainous areas exposed to winds. Winds are less strong in areas sheltered from the prevailing wind direction.

- **Significant to severe impacts** from typhoon-force winds are possible within any of the areas under Wind Signal No. 4.
- **Moderate to significant impacts** from storm-force winds are possible within any of the areas under Wind Signal No 3.
- **Minor to moderate impacts** from gale-force winds are possible within any of the areas under Wind Signal No. 2.
- **Minimal to minor impacts** from strong winds are possible within any of the areas under Wind Signal No. 1.

Furthermore, the outer rain bands of PAOLO will also bring **strong to gale-force gusts** over the following areas **not under Wind Signal** (especially in coastal and upland areas exposed to winds):

- **Today:** Bataan, Metro Manila, CALABARZON, Bicol Region, Panay Island, Occidental Mindoro, Oriental Mindoro, Northern Samar, and Eastern Samar
- **Tomorrow (4 October):** Batanes, Cagayan including Babuyan Islands, Ilocos Region, Zambales, and Bataan

Coastal Inundation

There is a **moderate to high risk of life-threatening storm surge** with peak heights reaching **1.0 to 3.0 m** within 24 hours over the low-lying or exposed coastal localities of Ilocos Norte, Ilocos Sur, La Union, Pangasinan, Zambales, Cagayan, Isabela, and Aurora. Refer to **Storm Surge Warning No. 9 issued at 2:00 PM today for the details.**

TROPICAL CYCLONE BULLETIN NR. 14

Typhoon PAOLO (MATMO)

Issued at 2:00 PM, 03 October 2025

Valid for broadcast until the next bulletin at 5:00 PM today.

HAZARDS AFFECTING COASTAL WATERS

Gale Warning is in effect over the seabards of Northern Luzon and the eastern seaboard of Central Luzon. For more details, refer to Gale Warning No. 3 issued at 5:00 AM today.

24-Hour Sea Condition Outlook

Up to high over the following coastal waters:

- Up to 7.0 m: The seaboard of Isabela.
- Up to 6.0 m: The eastern seaboard of mainland Cagayan.
- Up to 5.5 m: The seabards of northern Aurora and Ilocos Norte.
- Up to 5.0 m: The seaboard of Ilocos Sur; the remaining seaboard of Cagayan including Babuyan Islands.
- Up to 4.5 m: The seaboard of La Union.
- Sea travel is risky for all types or tonnage of vessels. All mariners must remain in port or, if underway, seek shelter or safe harbor as soon as possible until winds and waves subside.**

Up to rough seas over the following coastal waters:

- Up to 4.0 m: The seaboard of Batanes; the western seaboard of Pangasinan.
- Up to 3.5 m: The seaboard of mainland northern Quezon; the northern and eastern seaboard of Polillo Islands.
- Up to 3.0 m: The seaboard of Zambales and Camarines Norte; the remaining seaboard of Pangasinan.
- Mariners of small seacrafts, including all types of motorbancas, are advised not to venture out to sea under these conditions, especially if inexperienced of operating ill-equipped vessels.**

Up to moderate seas over the following coastal waters:

- Up to 2.5 m: The eastern seaboard of the rest of Quezon; the northern seaboard of Camarines Sur; the northern and eastern seaboard of Catanduanes.
- Up to 2.0 m: The seaboard of Lubang Islands; the western seaboard of Bataan.
- Mariners of motorbancas and similarly sized vessels are advised to take precautionary measures while venturing out to sea and, if possible, avoid navigation under these conditions.**

TRACK AND INTENSITY OUTLOOK

- It must be emphasized that heavy rainfall, severe winds, and storm surge may still be experienced in localities outside the landfall point and the forecast confidence cone. Refer to "Other Hazards affecting Land Areas" for more details. Furthermore, the track may still shift within the limit of the forecast confidence cone.**
- PAOLO is forecast to move generally west northwestward throughout the forecast period. On the forecast track, **PAOLO will cross the landmass of Northern Luzon today**, and emerge over the West Philippine Sea this afternoon or evening. It will exit the Philippine Area of Responsibility tomorrow (04 October) morning.
- PAOLO may slightly weaken while traversing the rugged terrain of Northern Luzon, although maintaining typhoon category is not ruled out. Based on the intensity forecast, re-intensification is highly likely once PAOLO emerges over the West Philippine Sea.

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to take all necessary measures to protect life and property. Persons living in areas identified to be highly or very highly susceptible to these hazards are advised to follow evacuation and other instructions from local officials. **For heavy rainfall warnings, thunderstorm/rainfall advisories, and other severe weather information specific to your area, please monitor products issued by your local PAGASA Regional Services Division.**

The next tropical cyclone bulletin will be issued at 5:00 PM today.
